

# PLANET<sup>®</sup> Dose

Dosimetry Software for Molecular Radiotherapy

Predictive dosimetry  
In vivo dosimetry control  
Advanced dose distribution analysis  
Consolidation and comparison  
Integrated reporting

Time-saving  
User-friendly  
Vendor-neutral

PLANET<sup>®</sup> by DOSI<sup>+</sup>soft

## <sup>90</sup>Yttrium-microspheres

Pre-implantation dosimetry based on <sup>99</sup>Tc<sup>m</sup>-MAA-SPECT exam

-  
Liver-lung shunt assessment

-  
Post-implantation dosimetry based on <sup>90</sup>Y-microspheres-PET (or SPECT Bremsstrahlung) exam

## <sup>177</sup>Lutetium-<sup>131</sup>Iodine

Multi-time points elastic registration

-  
Automatic deformable propagation of VOI across times

-  
Residence time calculation

-  
Dose computation based on voxel-level analysis

Voxel S-Values dose kernel convolution algorithm/Local Deposition Method

Dosimetry comparison: treatment planning vs. *in vivo* control

Consolidation of multi-treatment stages

How does PLANET® Dose personalize your patient therapy?

# PLANET<sup>®</sup> Dose for personalized SIRT dosimetry

Shaping the individual dosimetry for each patient

Personalized dosimetry-based treatment planning in SIRT holds great promises to improve therapy management for patients & healthcare professionals.

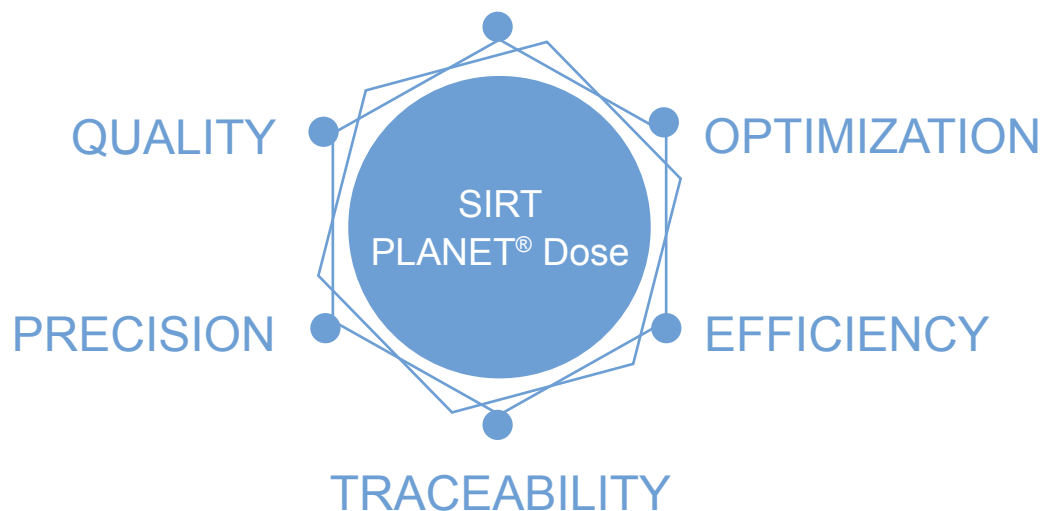

PLANET<sup>®</sup> Dose helps to optimize <sup>90</sup>Y-microsphere therapy in clinical routine. The optimal treatment assessment can now be customized for each patient individually by combining imaging, 3D dosimetry, treatment planning and *in vivo* control into a complete workflow-oriented solution.

It makes it possible to improve patient's safety and increase the confidence of clinical centers.

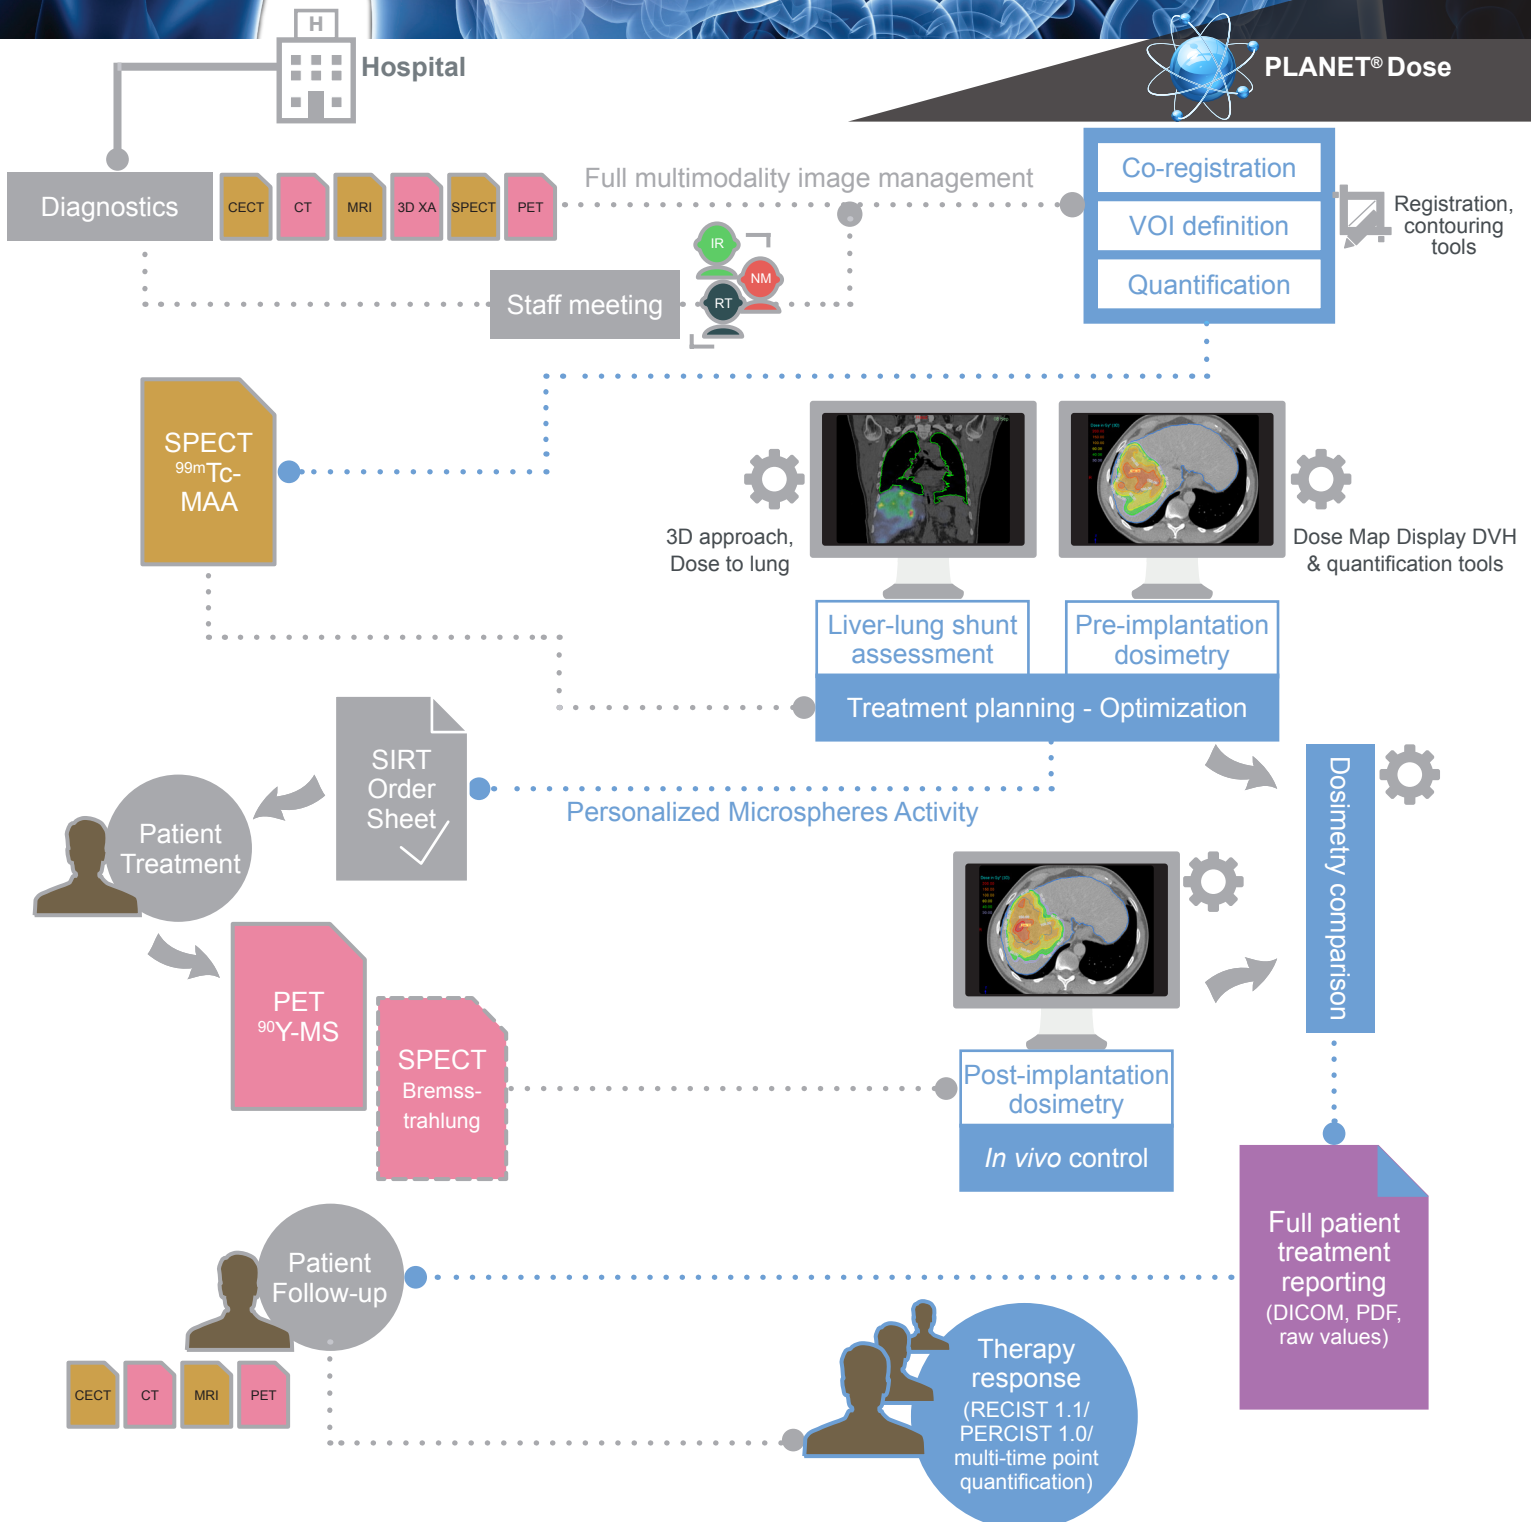

## Key Capabilities

### PERSONALIZATION

# Selective Internal Radiation Therapy Dosimetry Workflow

# PLANET<sup>®</sup> Dose Patient-specific Dosimetry Molecular RadioTherapy Dosimetry

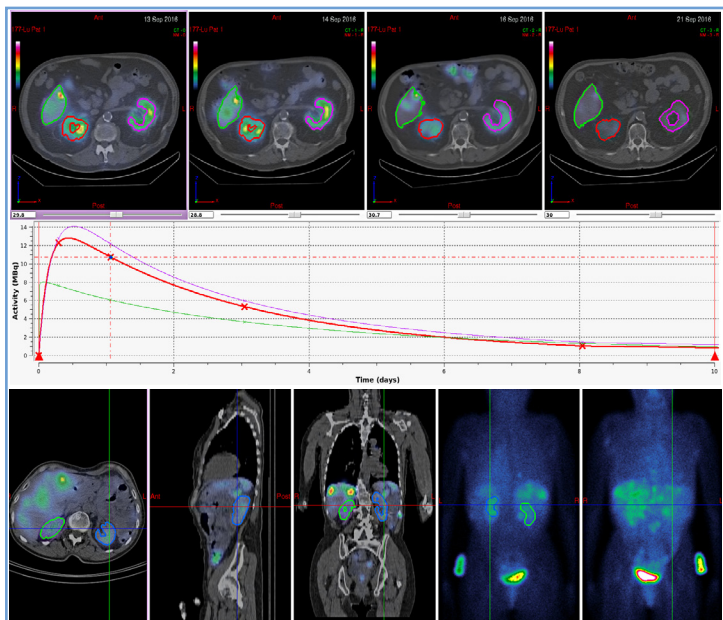

*DOSIsoft invites you to discover the adaptation of PLANET<sup>®</sup> Dose to <sup>177</sup>Lu & <sup>131</sup>I dosimetry for Molecular RT*

Dedicated to patient-specific dosimetry, PLANET<sup>®</sup> Dose is a vendor-neutral and versatile software solution for Molecular RadioTherapy (MRT). Already available for SIRT <sup>90</sup>Y-microsphere, PLANET<sup>®</sup> Dose extends its capabilities to support <sup>177</sup>Lu & <sup>131</sup>I-based therapies by offering fully integrated 3D and hybrid 3D-2D personalized dosimetry workflows.

This new adaptation allows the medical team to tailor patient therapy through multi-time points management, rigid or elastic registration, automatic VOI propagation, calculation of residence time and voxel-based dose computation. The medical team can also benefit from the PLANET<sup>®</sup> oncology features: anatomical/functional segmentation, advanced quantification, texture analysis and therapy response assessment.
